Professional Summary

Machine Learning Engineer Intern with a year of hands-on experience building, deploying, and optimizing machine learning systems. Strong in Python, TensorFlow, and scikit-learn, with experience delivering production-ready solutions across computer vision, NLP, and automation. Proficient in AWS and modern backend tools, and seeking internship or full-time opportunities with potential for long-term growth.

Technical Skills

Core ML & Data: Python, NumPy, Pandas, scikit-learn, TensorFlow, PyTorch, NLTK
Backend & MLOps: FastAPI, PostgreSQL, MySQL, Git, GitHub, LangChain, n8n
AWS: EC2, S3, Lambda, SageMaker, Amazon Bedrock
Frontend (Secondary): JavaScript, React

Experience

Leads-Campaign | *Machine Learning Intern* — *March 2025 - March 2026*

- Engineered a classification model to automate car insurance claim categorization, achieving 96.4% accuracy and **reducing manual review time by 15%**.
- Developed an AI-powered credit scoring engine and integrated it into a web interface using **React**, achieving an **F1-score of 0.92**.
- Deployed an n8n automation system for CRM data entry, **cutting data entry time by 15%** and decreasing errors by 25%.

Projects

lungcare.ai | *React, TensorFlow, Google ViT, Hugging Face* — lungcareai.vercel.app

- Developed a full-stack web application that enables healthcare professionals to detect and classify lung cancer using histopathological images.
- Integrated Google's Vision Transformer (ViT) to classify histopathological images, achieving a **98% accuracy rate** on the LC25000 lung and colon cancer dataset.
- **Engineered a data preprocessing pipeline** using TensorFlow's `tf.data` API to efficiently load and augment the 25,000-image dataset, **reducing model training time by 15%**.
- Built a responsive frontend using React, utilizing Tailwind CSS for UI and deploying the model via Hugging Face Spaces for efficient inference.

AI-Fitness-Tracker | *Streamlit, OpenCV, MediaPipe, Python, Prompt Engineering* — fitness-tracker-cv.streamlit.app

- Built a computer vision-based fitness tool using MediaPipe and OpenCV to track form and count reps for exercises like squats, pushups, and bicep curls.
- **Engineered a real-time pose estimation pipeline** using OpenCV, optimizing it to run at **30 FPS** on standard webcam hardware.
- **Implemented a visual feedback system** that calculates joint angles in real-time, using **Prompt Engineering** to deliver corrective guidance through an LLM interface.
- Developed a Nutrition Tracker to log meals and monitor dietary intake, integrated within an interactive Streamlit interface.

Certifications

- **AWS Certified Machine Learning Engineer - Associate**
- **AWS Certified AI Practitioner**
- **LangChain Academy Introduction to LangGraph**

Education

Acropolis Institute of Technology & Research — Indore, M.P.
Bachelor of Technology in Computer Science and Engineering — *Expected May 2026*
